

Order and Delivery management system

*Increase your profit through purchasing our “online
ordering system”.*

Team #8

2014

Project description

Nowadays people sometimes want to have meal without leaving home. But not all cafes provide delivery service. We offer “order and delivery management system” software which helps add this feature to any catering industry. Also it makes available to control staff.

Our goals:

- Bring online ordering feature to any cafe
- Increase amount of clients by simplifying ordering process
- Optimize work of staff

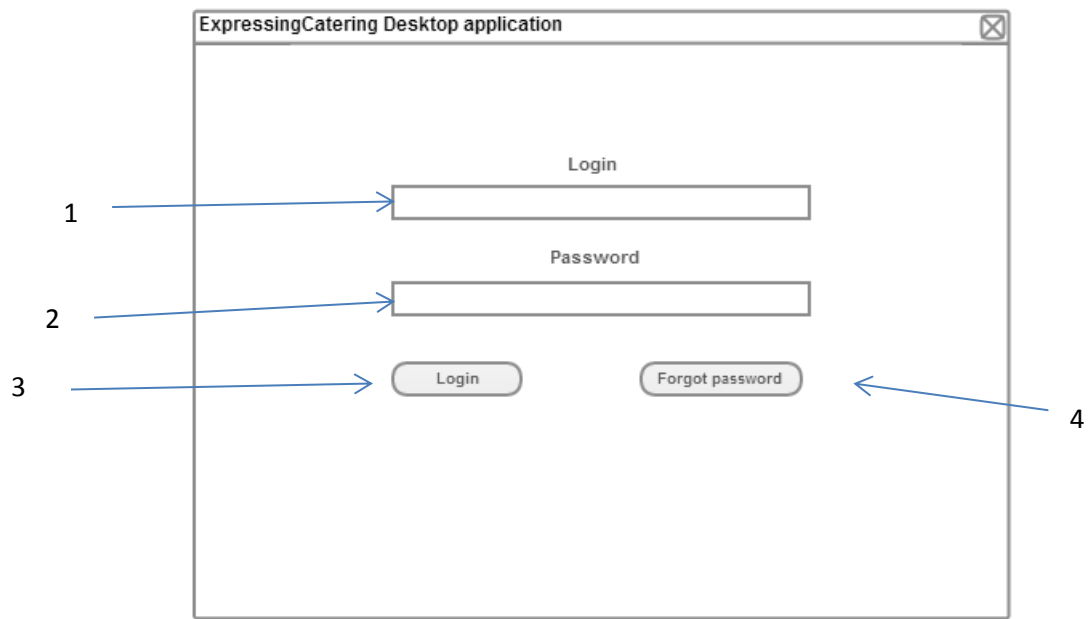

Actors:

1. user who order stuff;
2. manager who will manage orders and stuff;
3. administrator who will control staff;
4. (optional)courier;

Use-cases:

1. users: can view catalogue, can make orders;
2. manager: can manage orders, can manage contents of site, can manage couriers;
3. administrator: same things as manager plus staff control feature;
4. (optional)courier: can view orders which was assigned to him(address and map location,price of order);

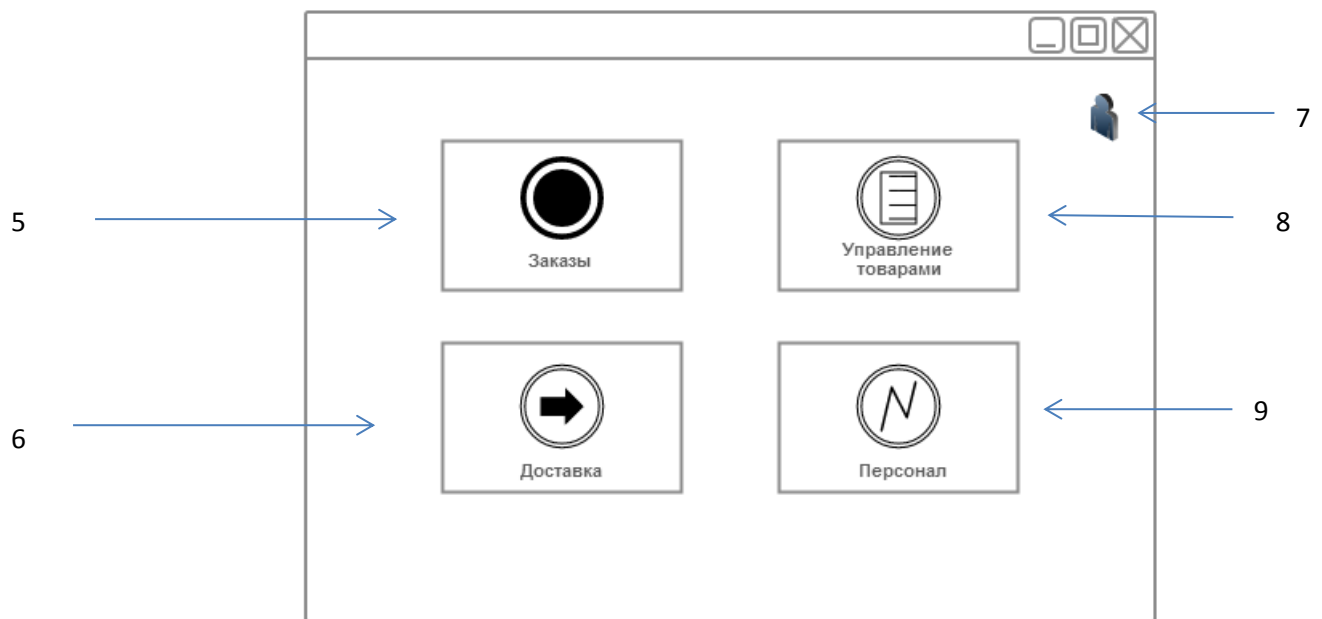

Screens of desktop version
